## Thermal post combustion of exhaust gas

The combustion oven facilitates the thermal post combustion of corrosive gas and has been manufactured from standard components.

The volumetric flow of corrosive gas can be up to 100 Nm<sup>3</sup>/h at a temperature of 400°C.

### Technical data:

Fuel:

Natural gas

Max. combustion performance of the ignition burner: 100 kW

Max. oven ambient temperature:

850°C
